

## MTH 337 Quiz 12 Sample: More Plotting

	<b>Python Code</b>	<b>Result</b>
1)	<pre>%pylab inline x = [1, 2, 3] y = [1, 2, 1] plot(x, y, "ko") axvline(1.5) xlim(0, 4) ylim(0, 3)  FILL IN THE MISSING DETAILS.</pre>	
2)		Which Matplotlib function generates a histogram? Just write the function name.
3)		Which Matplotlib function generates a contour plot? Just write the function name.
4)		Write code to plot the polar function: $r = 1 + \sin(\theta)$ . Choose for yourself a suitable number of points to plot.
5)		Suppose that $y = x^C$ , where $C$ is a constant. Which Matplotlib function for plotting $y$ against $x$ will show a straight line? Just write the function name.
6)	<pre>x = linspace(-1,1) y = linspace(-1,1) X, Y = meshgrid(x, y) Z = hypot(X, Y) contourf(x, y, Z)</pre>	<p>FINISH THE CODE FOR THIS PLOT.</p>
