I’m a Sophomore

- Plan on being at UB for at least 4 years
- It was my first choice
- I started off as a computer science major but switched to biotechnology
**Biotechnology**

- The exploitation of biological processes for industrial and other purposes.
- This glow in the dark puppy was produced with biotechnology, it can even breed and make more!
- Chose it due to an interest in the field/genetics.
After Graduation

- I will probably become a research assistant.
- I would be happy with any job offer, but it is a growing market, I can be a tad picky.
- Would prefer one within a couple hours of home.
- I want to get into the medical or environmental side of it over agriculture or pharmaceuticals.
More about me and UB

- I like the Buffalo Bills; I don’t watch very many sports, but my dad likes the Bills.
- I like how close UB is to my hometown and how big it is.
- If I could change one thing about it though, it would have to be tuition.
- It would be set to 0.
- If I had to change something realistic, I would more heavily enforce the no-smoking policy or set designated areas as everyone ends up smoking right in front of doors and the butts get everywhere.
What I’ve learned at CSE

- I took part in a two year information technology and computer systems course during high school.
- CSE is a nice refresher and I am still learning new things.
- I have learned more about excel commands and gotten quicker with them.
- I learned how to use a computer in a more ergonomic fashion.
- I learned that piracy can be wrong (sometimes).
