

**Supplementary Fig. 1.** Enrichment of pre-edited and edited mRNAs pulled down with GAP1/2 immunoprecipitations in the MRB8620 RNAi knockdowns as compared to the mock pulldowns performed with unconjugated Protein G Dynabeads. Relative abundance is calculated by  $\Delta\text{CtIP}/\Delta\text{CtMock}$  as in Madina et al. (2014). Labelled as in Fig. 5B.
